INTERNSHIPS/PRACTICAL EXPERIENCE

Starlink Installer | TESDA/DICT | February 2026

- Designed and deployed network infrastructure for remote school environments, ensuring reliable connectivity
- Configured routers, access points, and IP settings (DHCP), optimizing network performance and coverage
- Implemented firewall rules and content filtering to enhance security and enforce safe network usage
- Diagnosed, tested, and resolved system/network issues, delivering end-to-end deployment and technical support

IT Intern | Pru Life UK | February - May 2025

- Developed a CRM dashboard in Power BI to streamline tracking of policyholder information such as payment due dates, payment modes, and last touchpoints. Visualized key performance indicators (KPIs).
- Developed a Python-based web parser using Selenium to extract client data from the PRISM website and automate export to Excel, eliminating the need for manual data entry.
- Automated an Excel-based attendance sheet to calculate daily and monthly rendered hours, including analytics such as average time-in, time-out, and monthly overtime. Added a feature to categorize employees as "early birds" or "late worms" based on their average clock-in time.

SKILLS

Networking and System Administration

- Hands-on experience in networking fundamentals and Windows Server administration, including IP addressing, DHCP, DNS, Active Directory, user management, Group Policy implementation, print server configuration, and system maintenance, with strong troubleshooting skills to ensure reliable system performance.

Prompt Engineering

- Optimized AI prompts to generate accurate, context-aware outputs, improving efficiency and quality in content generation and automation workflows.

Cloud (Google Cloud Platform)

- I integrated Google Cloud services in our capstone project, utilizing Google App Engine for serverless application hosting, Google Cloud SQL for database management, and Google Cloud Storage for efficient file repository management.

Programming (Java and Python)

- Hands-on experience in implementing data structures and object-oriented programming (OOP) concepts.

EDUCATION

Universidad De Manila

- Bachelor of Science in Information Technology

PROJECTS

Data Parser | Python, Selenium

- Built a Python-based web parser that automates data extraction and exports structured datasets to Excel, streamlining data preparation for CRM and interactive dashboards in Microsoft Power BI.

YouTube Downloader | Python, yt-dlp, Rich, CLI development

- Developed a Python-based YouTube Downloader CLI using yt-dlp and Rich, enabling users to download video or audio to a designated folder with progress tracking and a clean terminal interface

Database Optimization | SQL

- Optimized database performance by implementing table partitioning and indexing strategies, significantly reducing query execution time on large datasets.

Gardenia: Automated Planting Robot | Arduino Uno, DC Motors, Servo Motors, Sensor

- Gardenia is an Arduino-based automated planting robot designed to assist in greenhouse farming. It systematically plants seeds at consistent intervals, improving efficiency, accuracy, and reducing manual labor.

Personal Website Portfolio | HTML, CSS, JavaScript

- Built a responsive personal website portfolio to highlight projects and technical skills, improving visibility to recruiters and collaborators.

CERTIFICATION & COURSES

Technical Education and Skills Development Authority (TESDA)

- Programming (Java) NC III
- Computer System Servicing (CSS) NC II

DataCamp

- Java Fundamentals
- Introduction to Kubernetes
- Software Development with Cursor
- AI-Assisted Coding for Developers
- Implementing AI Solutions in Business
- Intermediate SQL

Amazon Web Services (AWS)

- AWS Cloud Quest: Cloud Practitioner
